

Please do not limit the content available from satellite radio, such as XM. I travel for a living, and the ability to hear up to date traffic and weather information, when I need to hear it, draws me to that medium. I am able to know ahead of time, any traffic troubles in cities I will traveling through.

I never know when typical broadcast stations will updated their traffic, and it is never as in depth as to what I need.

Please consider the consumer, and do not take any action to limit my choices.

Thank You,

John Marone
